

More flexibility with left nozzle

Suitable for UNIDRIVE 500

The 40 mm accessory left-hand nozzle for the UNIDRIVE 500 semi-automatic welder offers an innovative solution for overlap welding. The nozzle offers additional flexibility, especially in difficult situations such as on pitched roofs and counter battens where welding from bottom to top is recommended.

In combination with the right-hand nozzle, it enables precise and reliable welding work in all roof applications.

Always weld pitched roofs from bottom to top.

Overlap welding nozzle, left, 40 mm, Art. 178.119
